

NEW COINS FOR THE NEW YEAR

Diameter and **thickness** of the coins are changed to maintain a progressive pattern with the denomination and different edges are incorporated for easy identification by visually impaired people

Coins are made of stainless steel which gives more **durability** than plated coins and light finish gives more **portability** in a wallet

Cost of production has been minimized with usage of stainless steel which is less expensive than other metals and by reducing the size and the weight of coins

Now you can obtain these coins from any commercial bank branch and can be used for payments amongst other currency notes and coins in circulation
