# FUNDAMENTAL DRIVERS OF INTERNATIONAL PRICE AND CONSUMPTION DISPARITIES 

## LONG VO

Economics Department
UWA Business School
$12^{\text {th }}$ International Research Conference
The Central Bank of Sri Lanka
December, 2019

## OBJECTIVE

- Is it possible to summarise the information contained in a large amount of economic variables?
- Yes
- Data dimension reduction technique, principal component analysis
- Consumption patterns in large number of countries is explained is predominantly by one determinant, closely related to income
- Income plays a minor role in global pricing behaviour.

## MOTIVATION

- Increasing availability of high frequency, large datasets
- Is this information useful in measuring economic activity?

## OBSERVABLE ECONOMIC ACTIVITIES

## Economic activity indicators

Growth rate (\%)
10 more variables! The more the merrier?

Year

## FROM TIME TO SPACE: CROSS-SECTIONAL DATA

## Difference (\%)

Approach 2: Principal component analysis (PCA):
Linear combinations of all variables. Deals with both the weighting issue and the interaction among

Country

## OUR DATA: ICP, 2011 ROUND

Values of...

| 182 Countries |
| :--- |
| 1. Algeria |
| 2. Angola |
| 3. Benin |
| 4. Botswana |
| 5. Burkina Faso |
| ... |
| 178. Sudan (WAS) |
| 179. United Arab Emirates |
| 180. Yemen |
| 181. Georgia |
| 182. Iran, Islamic Rep. |

Alternative?
$182 \times 155=28,210$ elements

## FOOD CONSUMPTION IN OECD COUNTRIES

## Sample

- International Comparison Program, 2011 round

14 Food ltems, 46 OECD countries

Two variables:

## Consumption

Relative prices

## CONSUMPTION CORRELATION MATRIX

| 1. Vegetabl | ables $\longrightarrow 2$ | 1 |
| :---: | :---: | :---: |
| 2. Rice | Rice |  |
| 3. Seafoods | Seafoods |  |
| 4. Food pro | Food products |  |
| 5. Fruits | Fruits |  |
| 6. Mineral v | Min. waters \& drin |  |
| 7. Bread |  | 0 |
| 8. Pork and | Pork |  |
| 9. Bakery p |  |  |
| 10. Chocola |  |  |
| 11. Beer |  |  |
| 12. Other $m$ |  |  |
| 13. Beef ans |  |  |
| 14. Poultry |  | -1 |

## A PRIMER ON PGA

$$
P_{i}=\underbrace{X}_{\text {Data matrix }} a_{i}(i=1, \ldots, 14)
$$

First PC ( $\mathrm{i}=1$ ):

| $\begin{array}{cc}\mathrm{pc}_{1,1} & =\mathrm{x}_{1,1} \mathrm{a}_{1,1}+\mathrm{x}_{2,1} \mathrm{a}_{2,1}+\cdots+\mathrm{x}_{1,14} \mathrm{a}_{14,1} \\ \mathrm{pc}_{2,1} & =\mathrm{x}_{2,1} \mathrm{a}_{1,1}+\mathrm{x}_{2,2} \mathrm{a}_{2,1}+\cdots+\mathrm{x}_{2,14} \mathrm{a}_{14,1} \\ \vdots & \vdots \\ \mathrm{pc}_{46,1} & =\mathrm{x}_{46,1} \mathrm{a}_{1,1}+\mathrm{x}_{46,2} \mathrm{a}_{2,1}+\cdots+\mathrm{x}_{46,14} \mathrm{a}_{14,1}\end{array}$ |
| :---: | :---: |

## SCREE PLOT

Contribution of PCs (\%) (These $\%$ are computed as $\gamma_{\mathrm{i}} / 14$ )

## $\mathrm{PC}_{1}$ AND $\mathrm{PC}_{2}$, OECD COUNTRIES

PC2

## Fourth

## 

Third
There is an association between PC1 and Income

## - First quartile average <br> 

PC1

## $\mathrm{PC}_{1}$ AND $^{2} \mathrm{PC}_{2}, 22$ ASIAN COUNTRIES

## PC2

## NATIONAL CUISINES?

## Sri Lanka

## Most consumed items

Rice
Seafoods
Vegetables

## Least consumed items

Pork and Lamb

## TAKEAWAYS

Evidence that SKL food consumption pattern is:

1- Different from the rest of the SA countries

2- More similar to countries in the same income quartile such as Malaysia or Thailand

PC1 picks up the effect of rising income in SKL

## OTHER GEOGRAPHICAL CLUSTERS

## CONSUMPTION PC1 VS. INCOME

## 125 ITEMS, 155 COUNTRIES

PC1

$$
\begin{aligned}
\mathrm{PC} 1= & 6.28 \text { Income }+\mathrm{C} \\
& \mathbf{R}^{2}=0.96
\end{aligned}
$$

## Corr(PC1, Income) $100 \times \sqrt{0.96}=98 \%$

Income

## PRICE PC1 VS. INCOME

## 125 ITEMS, 155 COUNTRIES

PC1

$$
\begin{gathered}
\mathrm{PC} 1=2.32 \text { Income }+\mathrm{C} \\
\mathbf{R}^{2}=0.057
\end{gathered}
$$

Corr(PC1, Income) 24\%

Income

## CONCLUSIONS : PCA APPLICATION

- PCA is a powerful dimensional reduction technique, particularly when the data correlation structure is complex and/or distribution of variables differ across items.
- In combination with high-quality data from the ICP, PCA allows us to obtain a clear economic implication for the common factor determining international consumption

## CONCLUSIONS: ICP APPLICATION

## Prices Consumption

Total data variation explained by PC1
86\%

## Remark

It is easier to summarise price co movement with a common factor

The common factor of consumption is predominantly determined by affluence

Consumption being driven mostly by local factors (income, in particular), while there is a tendency for prices to be globally determined (via trade, for example).

# MY TIME MUST BE UP. 

THANK YOU!

## QUESTIONS \& COMMENTS?
